

THE HEINE DELTAone DERMATOSCOPE.

Mobility and quality have now become *one*.

Small on the outside, big on the inside – this mobile masterpiece is taking medical professionals by storm. The crystal-clear image was accomplished using the achromatic HEINE optical system. What's more, it produces extraordinary colour rendering, due to the quality of our LED^{HQ}. Examinations are now particularly

comfortable due to the polarisation allowing doctors to work glare-free and without disrupting reflections. These three features – clarity, LED^{HQ} and non-reflective working – are what turn the DELTAone into a vital tool to carry in your pocket wherever you go.

Extremely sharp image with the achromatic HEINE optical system

Fast change from contact to non-contact examination

Fits into any pocket

Polarisation eliminates reflections and glare

THE DERMATOSCOPES: DELTA 30 AND DELTAone.

Seeing is believing.

Colours just as God created them. The DELTA 30 provides the best image quality of any dermatoscope we've ever built. Due to its small dimensions – and high diagnostic precision – the DELTAone is always a tool that users will gladly carry in their pocket. Their full

potential is revealed only by looking through them: the achromatic HEINE optical systems provide a level of colour rendering that has never been seen before thanks to the specially developed LED^{HQ}.

DELTA Dermatoscopes

When it comes to the minutest of detail.

The achromatic HEINE optical system, installed in the two dermatoscopes of the DELTA series, provides optimum illumination right to the outer edges. The light is distributed homogeneously and evenly across the entire field of view.

The result is no disturbing reflections, shadows or bright or dark spots. With unseen clarity and an outstanding level of detail – regardless of the working distance. This feature is available in the DELTA 30 with an impressive field of view size of real 30mm in diameter.
